

Next Generation Identity Management Technology

Save time. Save money. Drive Results.

manageID: One solution - for any credential!

manageID is a breakthrough architecture in Identity Management Solutions designed to meet the requirements of large enterprise-scale programs. Everything about manageID is designed from the ground up to deliver unmatched speed, flexibility and efficiency. One central database to work with any type of credential and/or biometric allows sharing of intelligence easily in a secure and controlled manner.

Modular and Rapidly Configurable.

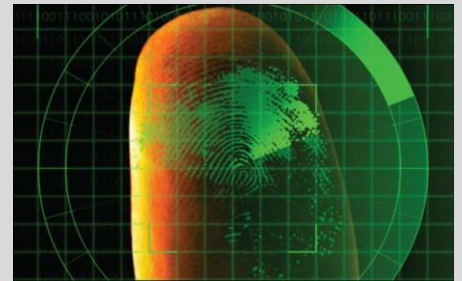

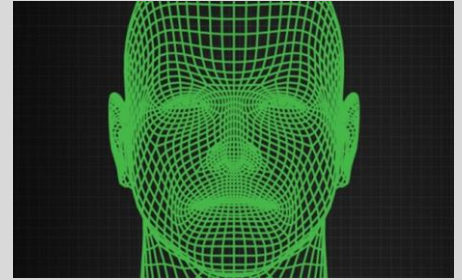

- Easily customizable web-based templates and specialized components
- Best-of-breed identity standards and best practices for common identity applications such as Border Control and Civil ID
- Rapid return on investment and a low total cost of ownership
- Available as Pre-Built or as a SaaS configuration to run identity applications in a secure cloud environment

Unique Technology Drives Efficiency.

- Dynamic Identity Program Template simplifies the configuration of user interface and data elements displayed on screen to customize each identity program
- Multiple identities can be issued at the same time, each with its own custom workflow and lifecycle management
- Synchronization Engine allows any manageID application to deliver credentialing data anywhere, anytime, with high reliability and performance

Supports Every Phase Of The Credentialing Lifecycle.

- Ability to design, produce and manage the entire lifecycle of a credential from pre-registration to proofing, vetting, adjudication and point of use
- A Chain-of-Custody Audit Trail ensures that every stage is handled properly

An Identity Management Framework Engineered for Extreme Speed and Flexibility

- Easily Customizable Web-Based Identity Management Modules
- Patented manageID Dynamic IPT™ and manageID Sync™ Innovations
- Proven, Open Web 2.0 Architecture
- SaaS options for Lower-Cost Deployment
- Standards-Based for Easy Integration
- Compatible with Every Biometric Credential
- Data can be easily shared across Applications and Jurisdictions

The manageID Advantage

Rapidly Configurable Identity Solution Suite	Workflow and rules-centric, standards-based (ANSI/NIST, ISO, ICAO, GXDM/NIEM). Comprehensive metrics and business intelligence dashboard.
Modular, Pre-Integrated Systems Processing	Applications, interfaces and engines are all modules. Database and identity technology are vendor agnostic – to integrate with industry best 3 rd party components.
Proven, Open Web 2.0 Architecture	Super scalable and extensible, with auto load balancing and parallel processing, as well as a variety of failover and redundancy options.

End-to-End Solution Suite Across the Entire Identity Lifecycle

Pre-Enroll / Pre-Enroll+: Web-based application through which applicants can enter their biographic details, upload scanned documents, IDs, and photographs in order to save time & labor during Enrollment.

Enroll / Enroll+: An identity capture application to collect biographic & biometric details. Supports multiple input /output devices such as fingerprint readers, iris, barcode scanners and smartcard readers.

Adjudicate: Reviews identity & risk assessment results in order to approve/deny an individual for participation/eligibility in a program. Notes, emails & digital documents can be amended to the person-record.

Verify / Identify: Detects any fraudulent activity that occurs during the verification process. Helps in the authentication of a person, identity or credentials to determine the identity of the person which he/she claim to be.

eGate: Entry/exit system for unattended identity verification stations. Includes document scanning, simplified GUI & touchscreen elements, biometric verification and automated control of advanced physical control barriers.

Comprehensive manageID Framework

Control Identity Management across multiple security applications

Framework includes:

- Database Engine
- Workflow & Rules Engine
- Security Authentication & Provisioning Engine
- Credential Management Engine
- Application & Interface Engine
- System Monitor & Report Manager
- Configuration Manager
- Lifecycle Manager
- Administrator
- Match Control Engine
- Synchronization Engine

Escort: Used to create & manage control lists used to assign users to escort controlled individuals from one location to another. Agents can raise alerts in case of delays/emergency situations.

Share: Customizable identity records exchange application having the ability to share identity records or control lists with any 3rd party software using a set of pre-defined formats.

Designer: Used to personalize & design multiple credential templates (IDs, certificates, licenses, permits etc.) corresponding to one or more credential application transaction types.

Credential Production: Produces identity credentials for individuals. Matches the already captured biographic & biometric details and compares it to ensure that the information is accurate to avoid identity thefts.

Stock Manager: Enables authorized users to control and track consumables and manageID personalized identity credentials. Manages stock centrally/distributed across facilities including available, used damaged or destroyed stock.
